

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	23 June 2026
Team ID	
Project Name	An employee requests installation of licensed software through the Service Catalog
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Service Catalog Request	Employee can create a licensed software installation request through Service Catalog.
FR-2	Request Details Management	Employee can enter Software Name, Version Required, License Justification, and Urgency details.
FR-3	Approval Workflow	System sends software requests for manager/authorized approval automatically.
FR-4	Task Assignment	Approved requests automatically create Catalog Tasks and assign them to Software Support Team.
FR-5	Request Tracking	Employee can track the status of their request using Request Number (REQ/RITM).
FR-6	Notifications	System sends email notifications for request submission, approval, rejection, and completion.
FR-7	Data Validation	Mandatory fields are enforced to prevent incomplete software requests.
FR-8	License Availability Handling	If the requested software license is unavailable, the system creates a notification and escalates to the admin.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Service Catalog interface should be simple, intuitive, and easy to use for employees to submit software installation requests.
NFR-2	Security	Role-based access controls must be implemented to ensure that only authorized users can create, approve, manage, and fulfill requests.
NFR-3	Reliability	The system should consistently perform workflows, business rules, approvals, and notifications without failures.
NFR-4	Performance	Requests, approvals, and task creation should be processed quickly to ensure a smooth user experience.
NFR-5	Availability	The Service Catalog and related workflows should be available and accessible whenever employees need to request software.
NFR-6	Scalability	The solution should be able to handle an increasing number of users, software requests, and integrations in the future without performance degradation.
