

Project Design Phase
Problem – Solution Fit

Date	24 june 2026
Team ID	
Project Name	An employee requests installation of licensed software through the Service Catalog
Maximum Marks	2 Marks

Problem – Solution Fit :

The **Automated Network Request Management in ServiceNow** project addresses the challenges organizations face in managing network-related service requests. Traditional request handling involves manual processes that often result in delays, approval bottlenecks, lack of transparency, and increased workload for IT teams. This solution automates the complete request lifecycle using ServiceNow's Service Catalog, Flow Designer, approval workflows, and email notifications, ensuring faster request processing, improved user experience, and efficient IT operations.

Purpose:

- Automate the network request process to reduce manual effort and processing time.
- Enable users to submit network service requests through a simple self-service portal.
- Improve request tracking with real-time status updates and automated notifications.
- Streamline approval workflows to ensure faster decision-making and SLA compliance.
- Reduce repetitive tasks for IT teams, allowing them to focus on high-priority activities.
- Increase transparency, reliability, and efficiency in handling network service requests.
- Enhance customer satisfaction by providing a user-friendly and automated request management system.
- Support organizational productivity by delivering secure, accurate, and timely network services.

PROBLEM	TARGET CUSTOMER	SOLUTION
Customer Problem: Employees need licensed software for their work, but the existing process is manual and handled through emails or messages. Employees face: • Delays in software approval • No proper request tracking • Lack of transparency in request status • Difficulty providing complete software details IT Support Teams face: • Managing requests from different channels • Manual approval handling • Difficulty assigning and tracking installation tasks • Lack of centralized request management	Primary Users  Employees requesting software installation Secondary Users  Managers / Approvers  Software Support Team  ServiceNow Administrators	A ServiceNow Service Catalog-based Software Installation Request System is developed to automate the complete request lifecycle. The solution provides: ✓ Service Catalog item for software requests ✓ Variables to collect: • Software Name • Version Required • License Justification • Urgency ✓ Automated approval workflow ✓ Automatic Catalog Task creation ✓ Assignment to Software Support Team ✓ Request tracking using REQ, RITM, SCTASK tables ✓ Notifications for request updates
PROBLEM – SOLUTION FIT		CUSTOMER BENEFITS
Problem	Solution	
 Manual software request process	 ServiceNow Service Catalog automation	 Faster software installation process
 Delay in approvals	 Automated approval workflow	 Reduced manual IT effort
 Lack of tracking	 Request status tracking through ServiceNow	 Improved request visibility
 Missing request details	 Mandatory catalog variables and validations	 Better approval management
 Manual task assignment	 Automated Catalog Task creation	 Standardized IT service process
 Poor communication	 Email notifications and updates	 Scalable solution for future software requests
FINAL STATEMENT The ServiceNow solution fits the identified problem by automating licensed software installation requests, improving employee experience, reducing IT workload, and providing a structured workflow from request submission to completion.
