

Project Design Phase
Proposed Solution

Date	24 june 2026
Team ID	
Project Name	An employee requests installation of licensed software through the Service Catalog
Maximum Marks	2 Marks

Proposed Solution :

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Employees need licensed software for their work, but the existing request process is manual, time-consuming, and lacks proper tracking. IT teams face difficulties managing approvals, assigning tasks, and monitoring software installation requests.
2.	Idea / Solution description	Develop a ServiceNow Service Catalog-based solution where employees can submit software installation requests. The system collects software details, triggers approval workflows, creates installation tasks automatically, assigns them to the Software Support Team, and tracks the complete request lifecycle.
3.	Novelty / Uniqueness	The solution provides an automated end-to-end software request process using ServiceNow features such as Service Catalog, Workflow, Business Rules, Catalog Tasks, Notifications, and Update Sets. It reduces manual communication and improves request transparency.
4.	Social Impact / Customer Satisfaction	Employees get faster access to required software with better visibility of request status. IT teams experience reduced workload, improved efficiency, and standardized service management.
5.	Business Model (Revenue Model)	The solution can be implemented as an enterprise IT Service Management solution. Organizations can use ServiceNow licensing and subscription models to manage software services, automation, and support operations.
6.	Scalability of the Solution	The solution can scale for multiple departments, large numbers of employees, additional software categories, license management integration, AI-based recommendations, and future IT automation services.
